

E33. CAMPUS CONFIGURATION & BUILDING APPROACH DESIGN FOR PATIENT EXPERIENCE

Kirsten Miller, AIA, EDAC, Associate | GBBN

Shan Jiang, PhD., Associate, Director of Research | GBBN

Aaron Anderson, AIA, LEED AP, Principal, Market Design Leader | GBBN

Chris Ralston, Director of System Communications | UC Health

ACKNOWLEDGEMENTS

Architectural Design:

GBBN (Planning & Interiors)

Project Partners:

Kolar (Env. Graphics & Wayfinding)

Realm Collaborative (Landscape)

The Lighting Practice (Lighting)

Danis Construction (CM)

The Kleingers Group (Civil)

Heapy (MEP) | THP Limited (Structural)

Support from UC Health System:

Patti Meszaros, AVP Planning, Design, Construction, & Real Estate

Jon Hornung, Sr. Project Manager, Design & Construction Dept.

Chris Ralston, Director of Systems Communications

GBBN Research Assistants:

Jackson Feinknopf, Architecture Designer | Zahra Daneshvar, Interior Designer

LEARNING OBJECTIVES

- Identify multifaceted factors that impact the patient arrival journey on a large hospital campus.
- Apply the behavior mapping toolkit to evaluate healthcare arrival and hospital building approach design.
- Understand hospital branding along with patient experience design.
- Integrate the project findings to improve the hospital circulation system and elevate evidence-based design.

SESSION AGENDA

- UC Health & the Medical Center's Trauma Crisis
- Elevating A.O.T Design Experiences
- Scientific Tools for Hospital Arrival POEs
- Discussion | Q&A

CHRIS RALSTON

 Health™ Director of Systems
Communications

UC HEALTH'S TRAUMA CRISIS

BREAKING NEWS | CINCINNATI

BILLS SAFETY DAMAR HAMLIN COLLAPSES
TAKEN TO HOSPITAL AND IS IN CRITICAL CONDITION

VISION

To be the premier academic referral health care system caring for the most advanced and complex health problems.

IN SCIENCE LIVES HOPE.

We are determined to push to the edge of what is possible for you and those who may never walk through our doors.

HEALTHCARE PROFESSIONALS

Partner with the Authors of Breakthroughs

[← Back to Home](#)

Say yes to the power of hundreds of expert hands and curious minds on your side. The UC Health community is relentlessly dedicated to collaboration, excellence, and shaping the future of medicine. Let's work together to make more hope possible.

Our Locations

Keeping your support network close is key for many patients and their caregivers. As Cincinnati's only adult academic medical center, UC Health spans the Tri-state region, with main campuses located in Clifton, Galbraith and West Chester, as well as various community settings throughout the region.

Pre-occupancy Observations

ELEVATING A.O.T. DESIGN EXPERIENCE

What's At Stake?

35000

Of **remotely conscious decisions** are performed each day by the average person. **Nearly 1 every 1.8 seconds.**

ELEVATING A.O.T. DESIGN EXPERIENCE

PROJECT GOALS:

- Clarify sequence of Arrival, Orientation, & Transition for visitors at multiple scales.

- Create a mantle for the UC Health brand that expresses the pride, aspirations, and quality of care of the institution.

- Create a cohesive, understandable, and useful central space that enhances the patient and visitor experience

DESIGN PRINCIPLES:

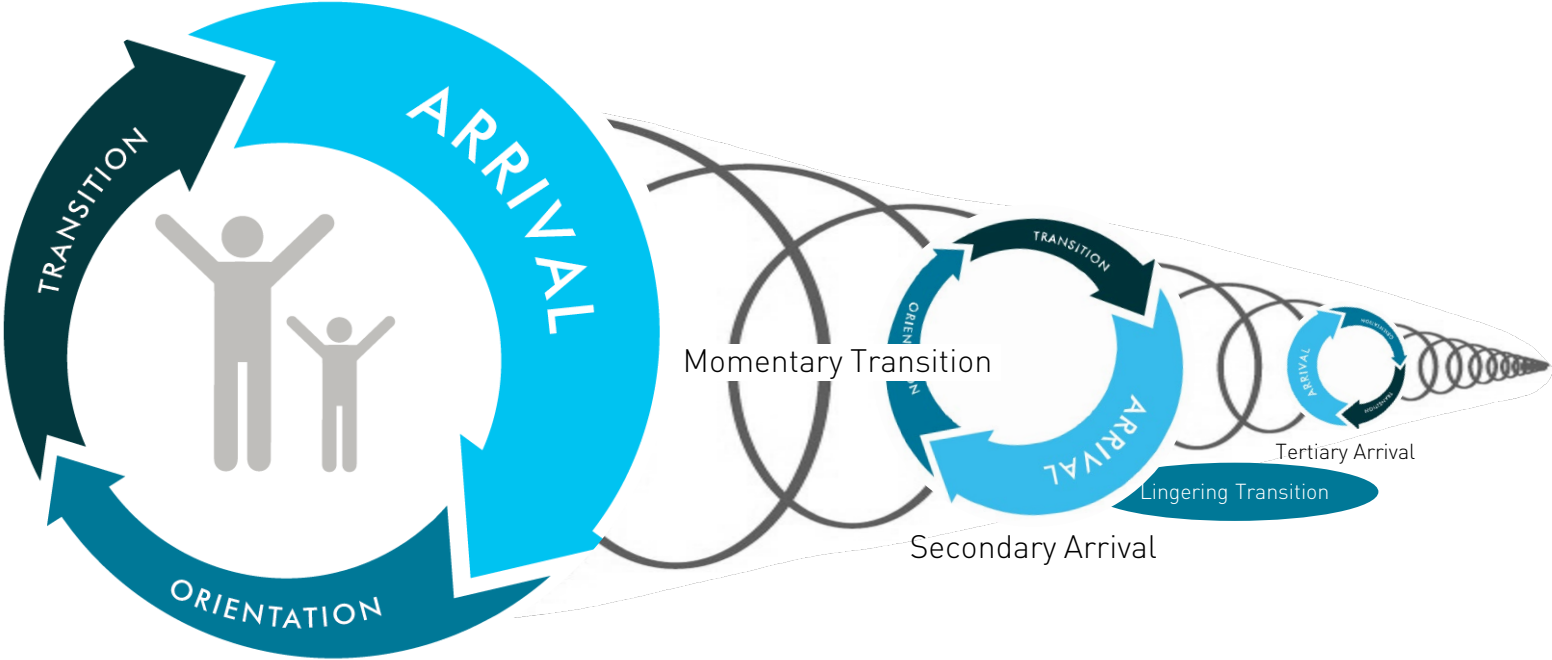

- Establish Hierarchy
- Simplify & Declutter
- Intentional Placemaking

- Translate and Express “Science as Texture” within occupied space.

- Program Performance
- Program Experience

ELEVATING A.O.T. DESIGN EXPERIENCE

Foundational Principles

Primary Arrival

Momentary Transition

Secondary Arrival

Tertiary Arrival

Lingering Transition

ELEVATING A.O.T. DESIGN EXPERIENCE

"I CAN" – Self Efficacy & Empowerment

A Dopamine Boost By
Creating Small Wins

Choice and control

- Variety of seating is supported

Wayfinding

- Ability to see destination or next step in proceeding there
- Landmark elements help mark the path
- Cognitive chunking for multisensory memory moments
- Entry points are clear
- Opportunities to take independent action

Hierarchical barriers

- High barrier such as transaction counter
- Staff is behind glass or otherwise physically separated from user

SCIENTIFIC TOOLS FOR HOSPITAL ARRIVAL POEs

Key Findings

- POE findings indicated that UCMC Arrival Zone is a well-connected space with **high efficiency and easy-to-navigate** circulation design for both vehicle and pedestrian traffic.
- A wide range of activities take place in the hospital lobby among different groups of users. The hospital lobby is not simply an entryway or a transportation hub; it's a **social** space, **waiting** space, and **care** space.
- The Central Info Desk serves as a landmark and wayfinding hub for pedestrian patients and visitors.

SCIENTIFIC TOOLS FOR HOSPITAL ARRIVAL POEs

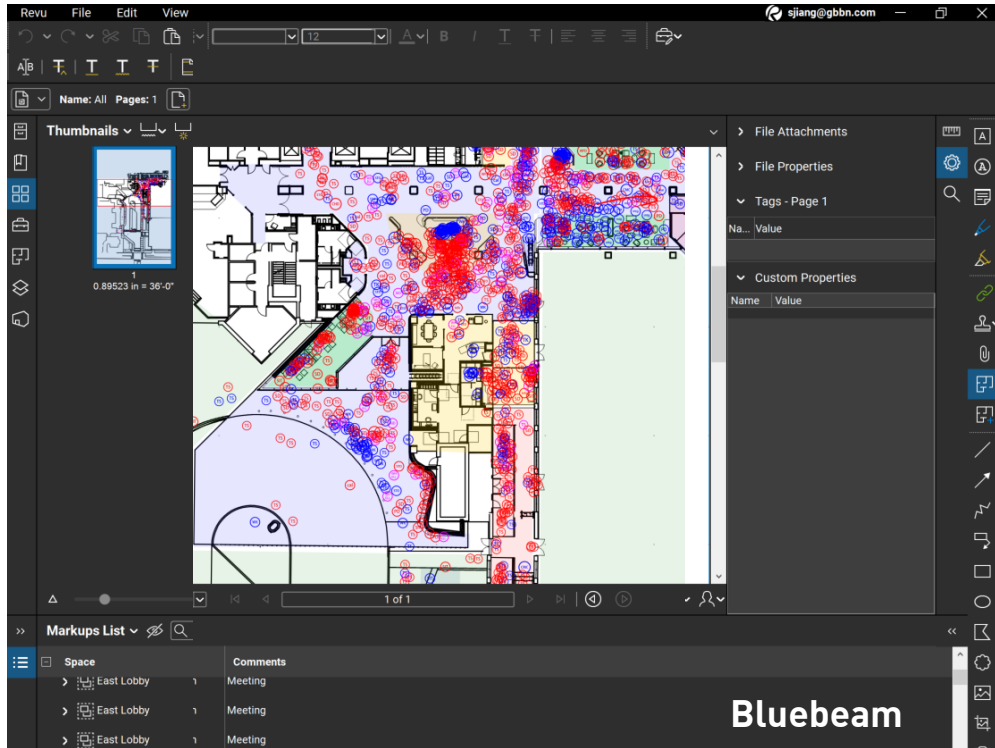

Behavior Mapping Protocol

Two strategies:

- Snapshot/scan pedestrians on the ground level – headcounts, behaviors and distribution in space.
- Shadow vehicles from a vantage point – destination, route selection, behavior/activities.

Tools:

- Pedestrians: Digital via Bluebeam
- Vehicles: GIS Cloud

SCIENTIFIC TOOLS FOR HOSPITAL ARRIVAL POEs

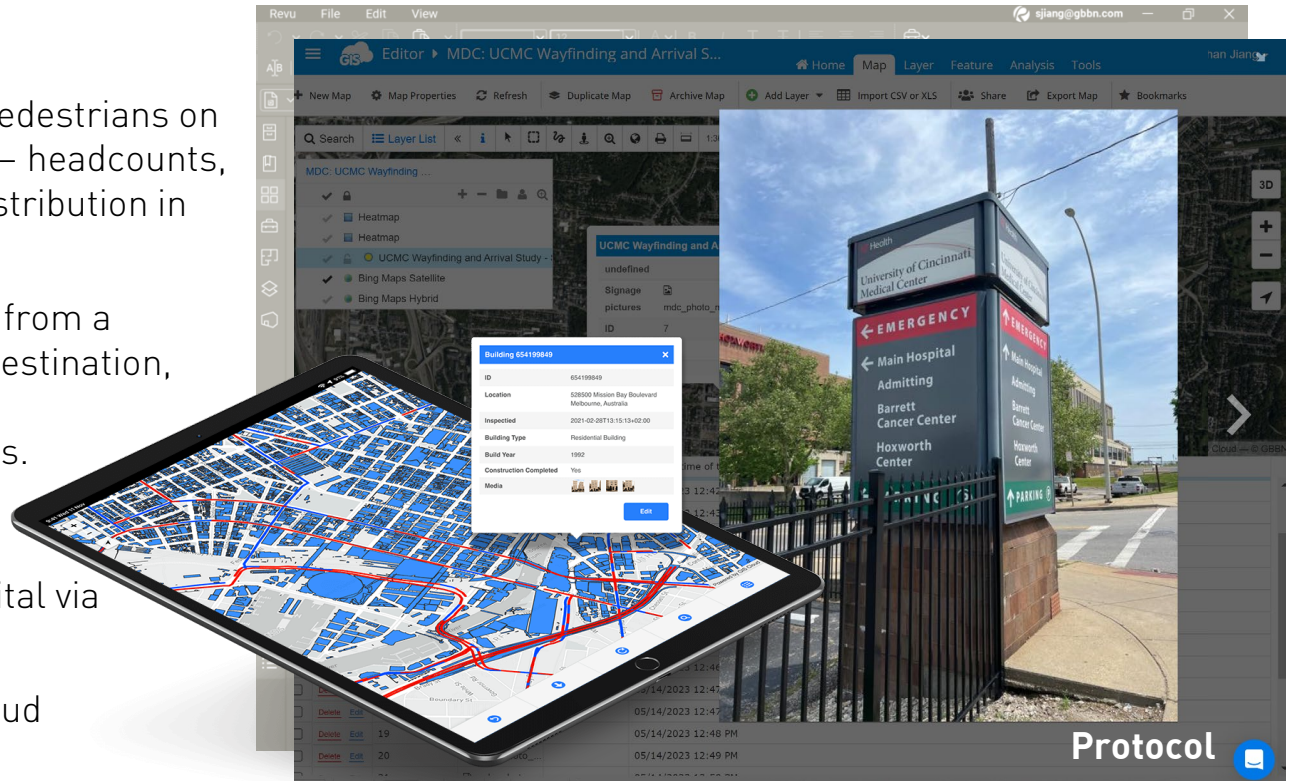

Behavior Mapping Protocol

Two strategies:

- Snapshot/scan pedestrians on the ground level – headcounts, behaviors and distribution in space.
- Shadow vehicles from a vantage point – destination, route selection, behavior/activities.

Tools:

- Pedestrians: Digital via Bluebeam
- Vehicles: GIS Cloud

Protocol

SCIENTIFIC TOOLS FOR HOSPITAL ARRIVAL POEs

Vehicle Shadowing

Variables:

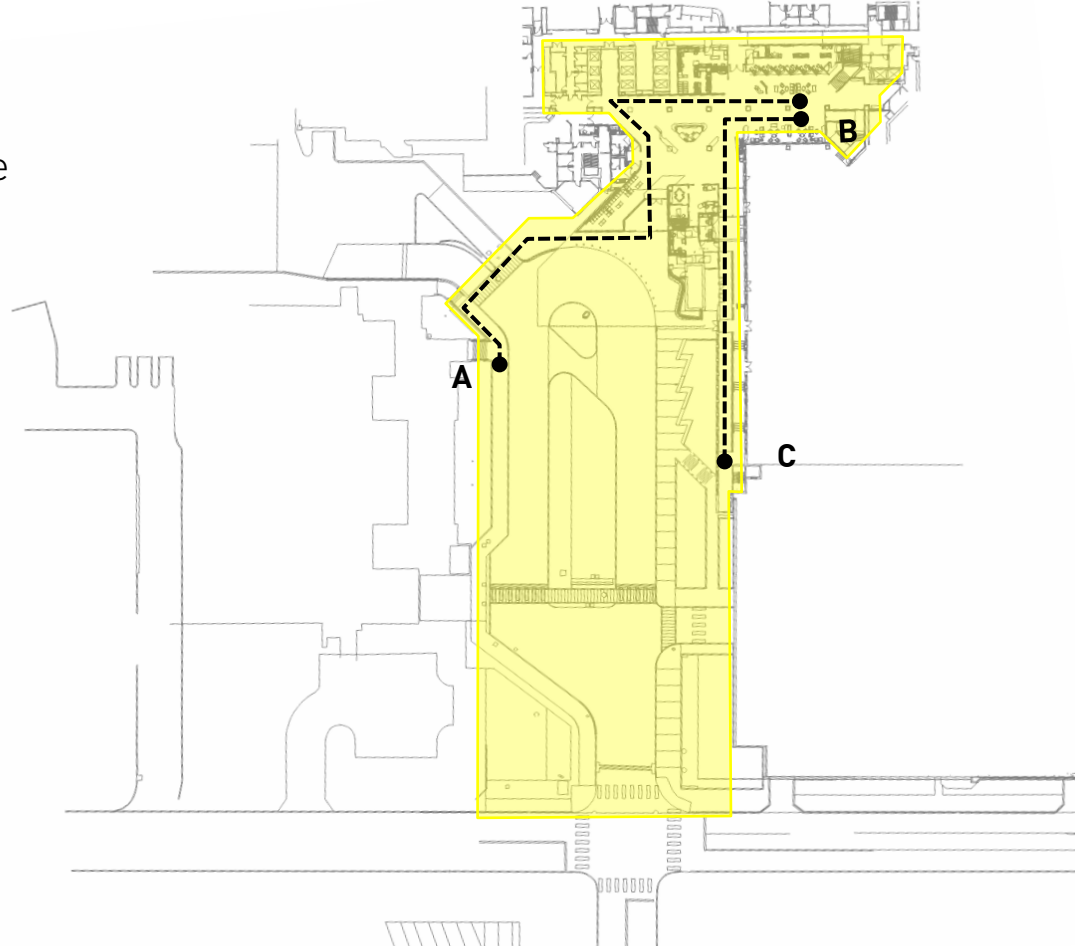

- Route segment
- Node
- Stop (major stop & pkg. dest.)
- Vehicle Behavior / Activity
- Time factors

SCIENTIFIC TOOLS FOR HOSPITAL ARRIVAL POEs

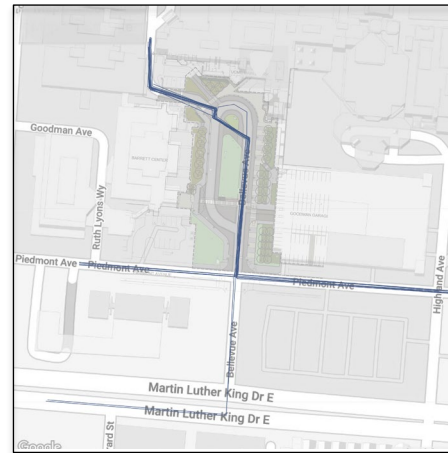

Pedestrian Scanning

- System scanning of occupancy situation during observation time
- Predetermined route for the building arrival and transitional spaces, following the A-B-C and C-B-A sequence alternatively
- Variables:
 - Occupancy profile
 - Occupancy count
 - Space and location
 - Behavior/activity

POE OBSERVATIONS

Vehicle Traffic Volume

Ambulance (6.9%)

Public Transportation (15.8%)

All Personal Vehicles (74.3%)

Passthrough (34.6%)

Garage (17.7%)

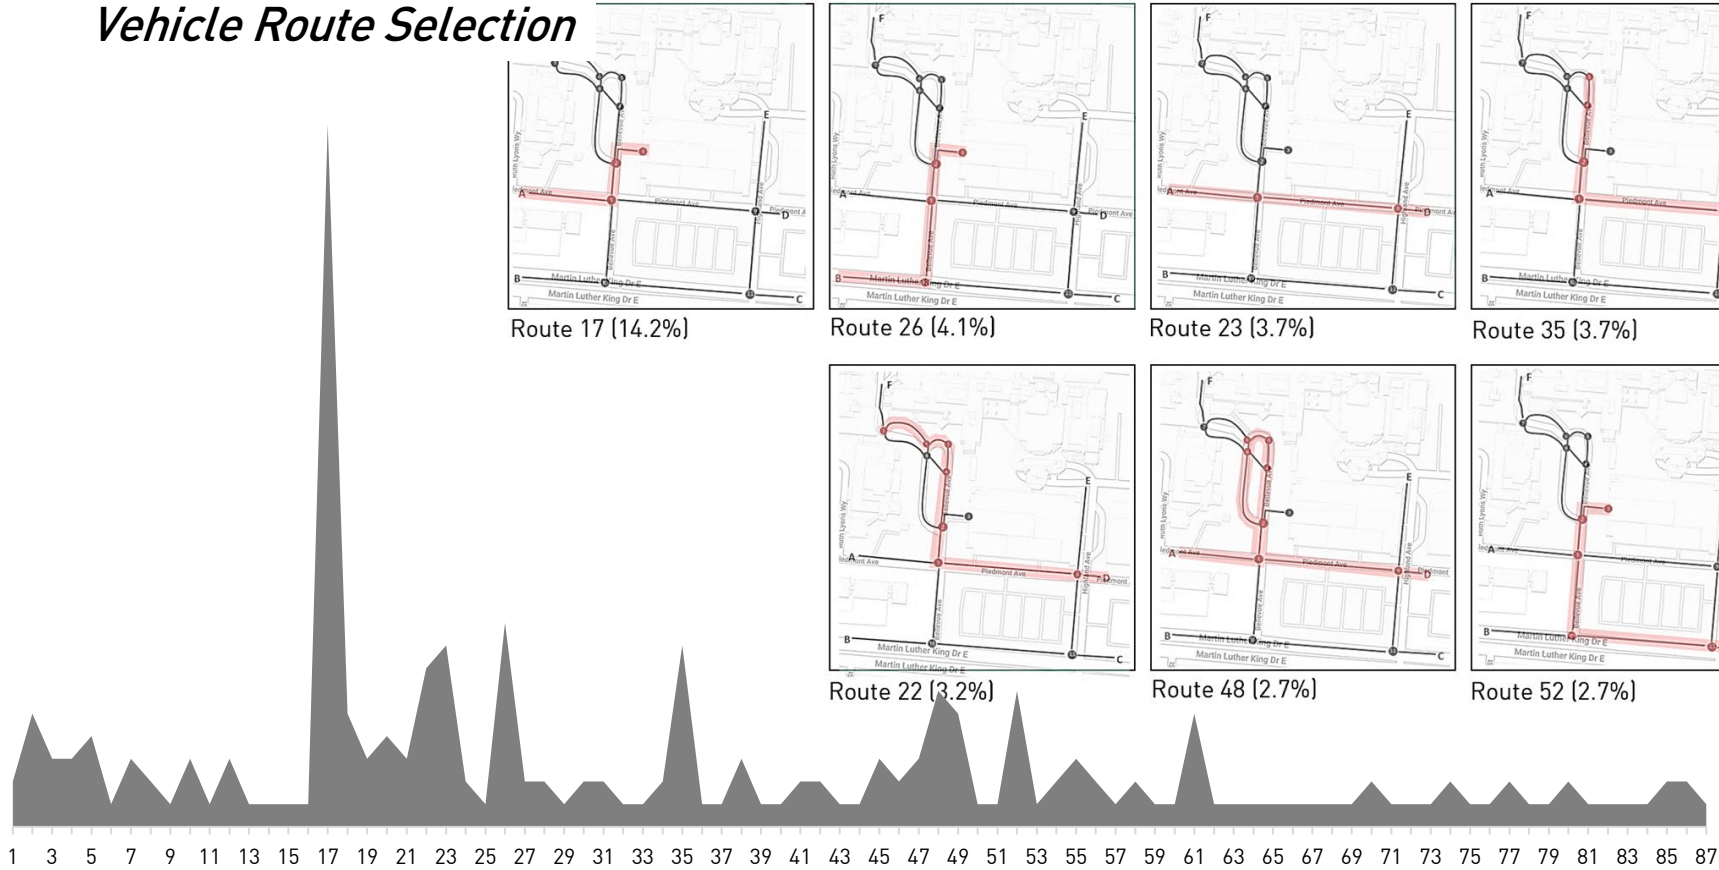

Inpatient Discharge (6.3%)

Route 48 (2.7%)

Route 52 (2.7%)

POE OBSERVATIONS

Vehicle Traffic by Node

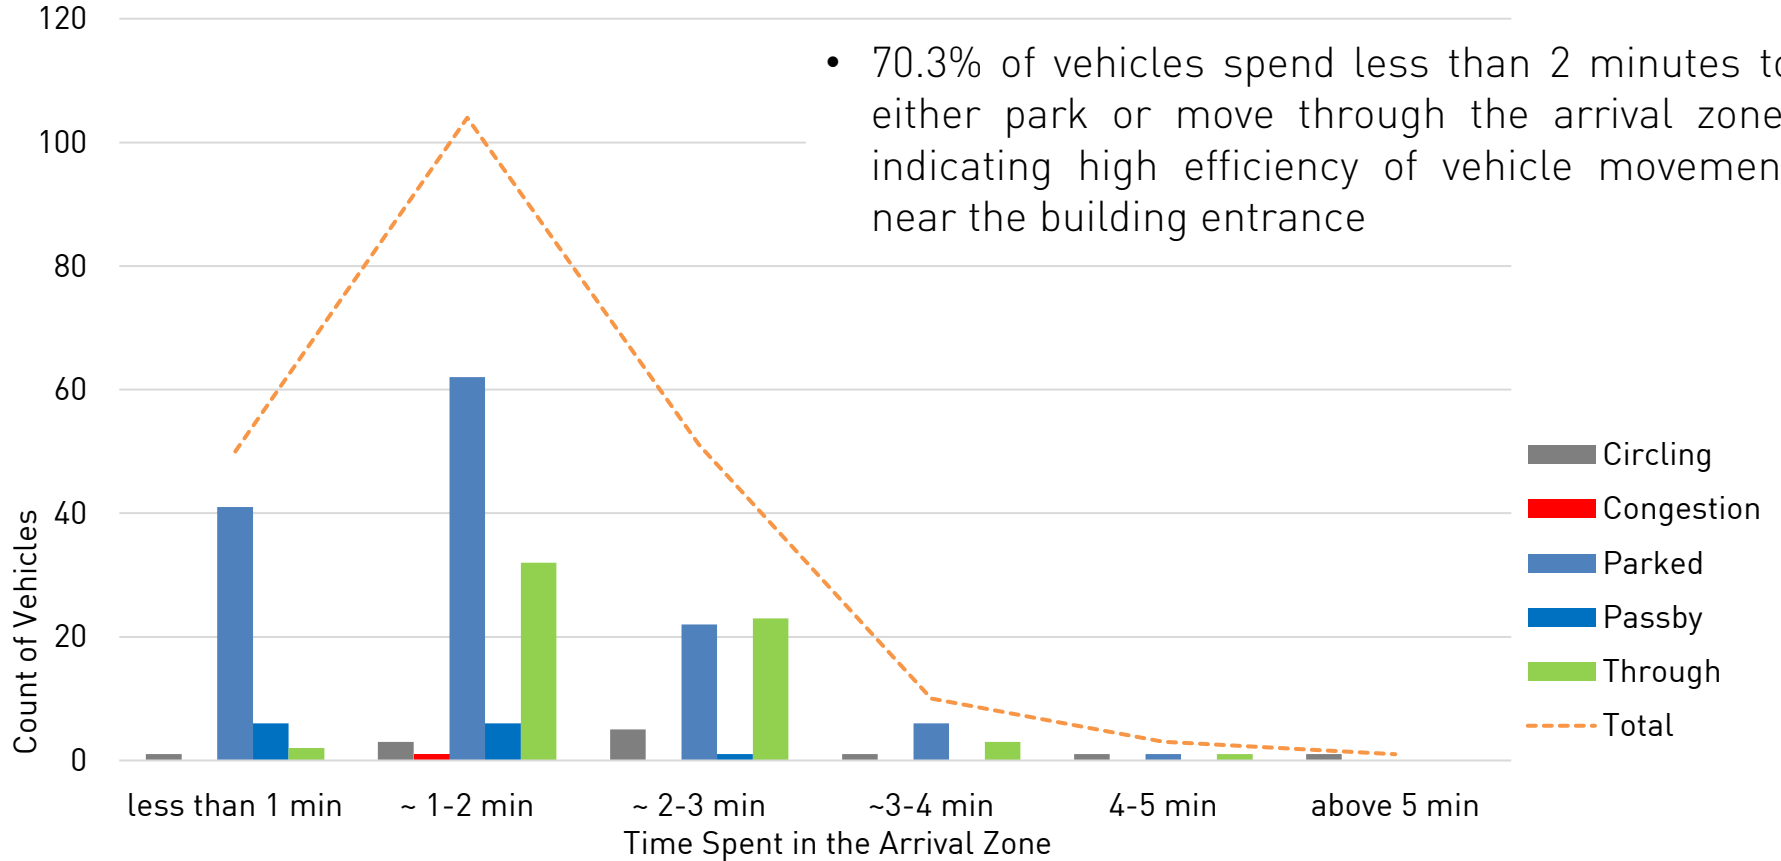

POE OBSERVATIONS

Vehicle Behavior in the Arrival Zone

POE OBSERVATIONS

Time Factors

POE OBSERVATIONS

Major Stops

- Separate routes for ambulances.
- More vehicle stops occur along the “inward” side of the paths near the building main entrance.

POE OBSERVATIONS

Pedestrian Traffic Volume

All Occupants ($N= 2096$)

Red – Ambulatory patient/visitor ($N= 1257$)

Pink – The disabled or patient in critical condition ($N= 106$)

Blue – Hospital staff ($N= 733$)

*Each bubble is 3ft in diameter, representing the minimum social distance in public spaces

POE OBSERVATIONS

Ambulatory Patients / Visitors

Ambulatory Patient/Visitor ($N = 1257$)

Occupancy High

Low

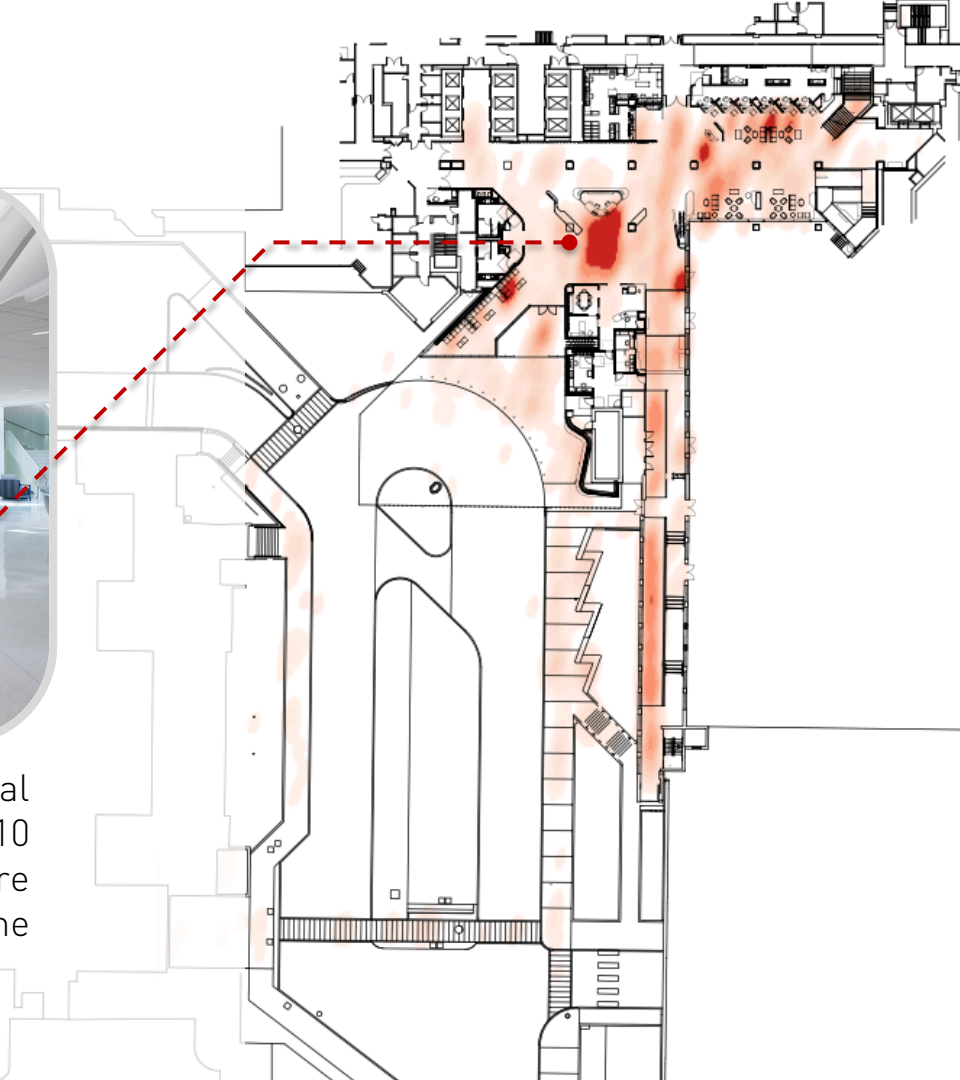

POE OBSERVATIONS

Ambulatory Patients / Visitors

- Observed a total of 214 people at the Central Info Desk within 11 observational intervals (10 min. each, random sampling); 30.4% were given verbal wayfinding guide by staff. The average resolution time is ~ 0.5 min.

POE OBSERVATIONS

Disabled / Critical Condition

Disabled/Critical Condition (N = 106)

Occupancy High

Low

POE OBSERVATIONS

Disabled / Critical Condition

- Elevated waiting experience for disabled patients or people using a wheelchair / walking aid to be picked up near the main entrance.

POE OBSERVATIONS

Staff Members

Hospital Staff ($N = 733$)

POE OBSERVATIONS

Staff Members

- Staff members use the main waiting area for meeting and gathering.
- Side-door for internal circulation by staff members.

ADDITIONAL TAKEAWAYS

- Pedestrian traffic volume from the garage connector is **2.4** times of the traffic from the main entrance.
- Pre-registration help divert **21.7%** of the traffic flow and provide extra point of care before the check-in task.
- A wide range of activities take place in the hospital lobby among different groups of pedestrians. The hospital lobby is not simply an entryway or a transportation hub; it's a **social** space, **waiting** space, and **care** space.

A RESEARCH CONTINUUM

- On-going research collaboration with the University of Kansas
- Campus-wide configuration and intelligibility research via **Space Syntax** and observational study
- A validated protocol
- Signage system regarding traffic analyses

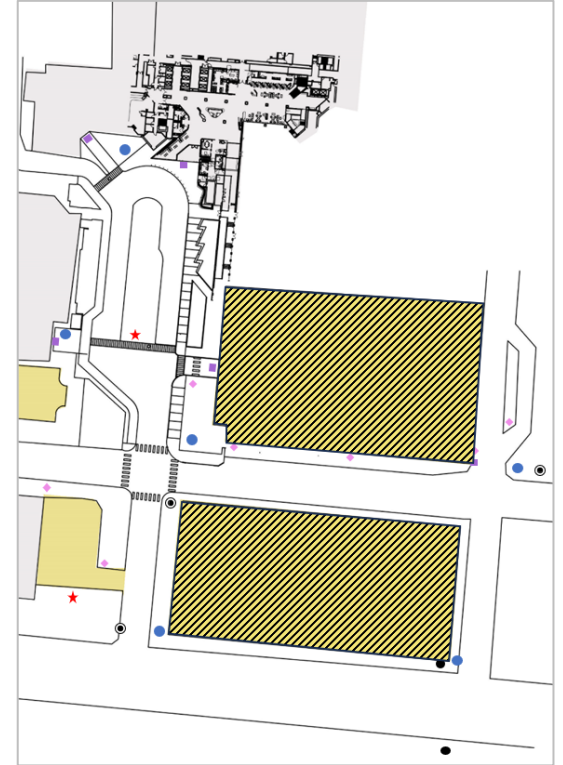

Figure Source: Cai & Jiang, et al., (in progress)

OVERALL TAKEAWAYS

- Branding and identity design is an integral part of hospital architecture design, which play essential roles in the overall wayfinding design of large hospitals.
- The layout of the hospital campus significantly influences patients' arrival, orientation, and transit experiences.
- Effective hospital wayfinding design must consider both vehicle and pedestrian behaviors. Factors such as parking facilities and transitional spaces from exteriors to interiors are crucial considerations.
- Collaborative efforts between architectural design and healthcare system operations make an impact on patients' overall wayfinding experience.
